

This document will explain how to configure a gcal channel step by step

Configuration

calendar id

clientID

clientSecret

Save Configuration

Abort

To configure a channel, you need three information:

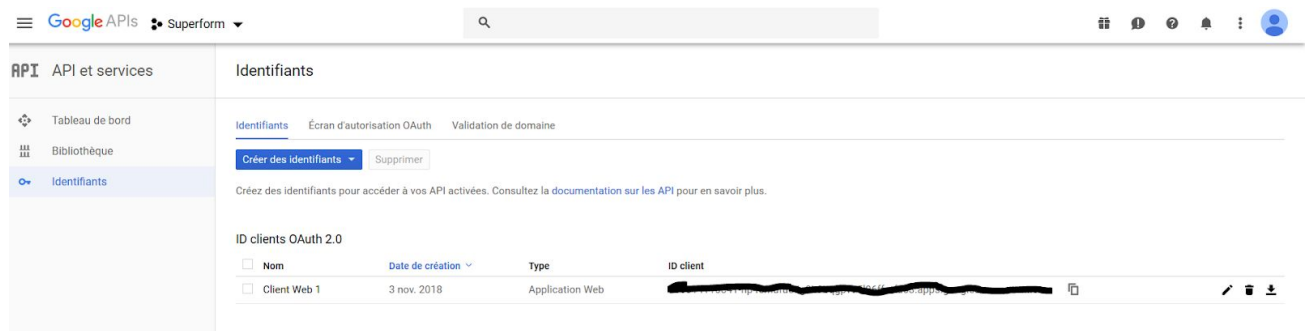

clientID & clientSecret & calendar id

clientID & clientSecret

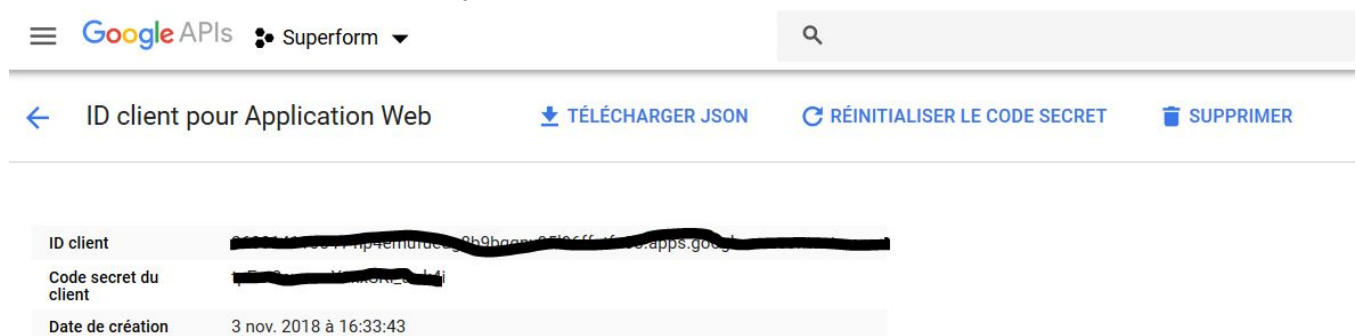

These two are used to link your google account and ask permission to publish in the calendar of this account.

This is how do you retrieve the information

1. You need to create a [project](#) with your google account. (You can follow this [tutorial](#) if you want but it's very straightforward.)
2. You need to enable the gcal api in the [Google Api console](#)
3. Stil in the Google Api console, you need to generate a key

4. Click on the detail on the key and retrieve the information

calendar id

It's the calendar you want the event is related.

It's very simple, follow this [tutorial](#).

Enjoy your new channel!
